

FOREST RESOURCE REPORT 2013

ALABAMA FORESTRY COMMISSION
513 Madison Avenue
Montgomery, Al 36130
(334) 240-9300

www.forestry.alabama.gov

The Alabama Forestry Commission is an equal opportunity employer and provider. In accordance with federal law and Alabama Forestry Commission policy, this agency does not discriminate on the basis of race, color, national origin, sex, age, or disability.

FOREST RESOURCE REPORT 2013

By
Alabama Forestry Commission (AFC)

This report contains several economic status indicators of the forest resources and forest industry in Alabama for 2013. Included in this report are the following indicators:

- 2013 FIA Timberland Acreage Statistics by County and Forestry Commission Region
- 2013 FIA Timber Inventory Statistics by County and Forestry Commission Region
- 2013 Timber Harvests Volume by County
- 2013 Timber Price Trends
- 2012 Timber and other Agricultural Commodities Rankings (*latest statistics available*)
- 2010 Forest Industry Statistics (*latest statistics available*)
- 2013 Forest Products Investments in New & Expanding Businesses

ALABAMA'S FOREST RESOURCE

Timberland Acreage

- Alabama timberland covers 22.8 million acres, the third largest commercial forestland in the nation.
- Approximately 94% of Alabama's timberland is privately-owned and 6% of timberland is publicly-owned. Forest industries (companies that own a wood processing plant) own approximately 8% of Alabama's timberland while 86% is owned by the non-industrial private sector.
- Alabama forests are comprised of 43% hardwood stands, 43% softwood (mostly pine) stands and 14% mixed pine/hardwood stands.

NOTES: Statistics come from 2013 Forest Inventory & Analysis (FIA) data.

A very small portion (<1%) of timberland acreage is classified as “non-stocked” by FIA guidelines. The “non-stocked” acres have been included in the “oak-pine” category.

A tract of timberland is classified as “non-stocked” if at the time the FIA plot was inventoried there was <10% stocking of trees. This situation occurs on sites that have recently been clearcut.

Numbers in rows and columns may not sum due to rounding.

***Note:** FIA data is statistically valid at the State and Regional level. Individual county statistics are provided so that any combination of counties can be added together until the totals are large enough to meet the desired degree of reliability.

Timberland Acres by AFC Region and Forest Type Group - SOFTWOODS

Timberland Acres by AFC Region and Forest Type Group - MIXED

Timberland Acres by AFC Region and Forest Type Group - HARDWOODS

- Sawtimber-sized stands comprise 47% of Alabama’s timberland, while 27.5% of forest stands are comprised of mostly pulpwood-sized timber. Seedling/sapling-sized stands account for the remaining 25.5% of timberland acreage.

NOTES: Statistics come from 2013 Forest Inventory & Analysis (FIA) data.

“Sawtimber” refers to stands in which the majority of the crown cover consists of trees 9.0” DBH and greater for softwood forest types and 11.0” DBH and greater for hardwood forest types. **See the exception listed below in the “Seedling/Sapling” definition**

“Pulpwood” refers to stands in which the majority of the crown cover consists of trees between 5.0” and 8.9” DBH for softwood forest types and between 5.0” and 10.9” DBH for hardwood forest types. **See the exception listed below in the “Seedling/Sapling” definition**

“Seedling/Sapling” refers to stands in which 2/3 of the crown cover consists of trees less than 5.0” DBH.

**NOTE:

In a stand where seedlings/saplings make up over 50% of the crown cover **but less than 67%**, stand size is determined by the predominance of either pulpwood-sized trees or sawtimber-sized trees. EXAMPLE: In a two-storied pine shelterwood stand comprised of sawtimber and pulpwood-sized trees in the upper story (90% sawtimber-sized and 10% pulpwood-sized) and seedlings and saplings in the lower story, in which the lower story comprises 60% of the crown cover and the upper story comprises 40% of the crown cover, the stand size would be considered “sawtimber”.

A very small portion (<1%) of timberland acreage is classified as “non-stocked” by FIA guidelines. The “non-stocked” acres have been included in the “seedling/sapling” category.

A tract of timberland is classified as “non-stocked” if at the time the FIA plot was inventoried there was <10% stocking of trees. This situation occurs on sites that have recently been clearcut.

Numbers in rows and columns may not sum due to rounding.

Timberland Acres by AFC Region and Stand Size - SAWTIMBER

Timberland Acres by AFC Region and Stand Size - PULPWOOD

Timberland Acres by AFC Region and Stand Size - SEEDLING/SAPLING

Timber Volume

- There are 560.6 million tons of softwood growing stock volume and 576.9 million tons of hardwood growing stock volume in Alabama.
- Since 2000 total growing stock volume (tons) has increased by 14.9%; softwood volume has increased by 25.5% and hardwood volume has increased by 5.5%.
- There are approximately 919.5 million dry tons of tree and sapling “biomass” found on timberland. Biomass is defined as the weight of solid wood and bark in live trees 1.0 DBH and larger from the ground to the tip of the tree. The weights of wood and bark in lateral limbs, secondary limbs, and twigs under 0.5 inch in diameter at the point of occurrence are included on saplings, but excluded on pulpwood and sawtimber-sized trees.
- The Southwest Region has more timber volume than any other region and 19.8% more than the region that has the second highest volume amount (Northwest).
- The volume of softwood timber in the Southwest Region is considerably greater than any other single region; 52.9% more than the Northwest Region which ranks second.
- The North Region has the most hardwood volume; 5.5% more than the Northwest Region which ranks second.

NOTES: Statistics come from 2013 Forest Inventory & Analysis (FIA) data.

“Growing stock” refers to high-quality trees capable of producing lumber, veneer, poles, or ties/timbers currently or in the future, based on FIA specifications.

Numbers in rows and columns may not sum due to rounding.

Growing Stock Volume by AFC Region and Species Group - SOFTWOODS

Growing Stock Volume by AFC Region and Species Group - HARDWOODS

Timber Net Growth (total growth minus mortality) - Period 2001 to 2013

- For the time period 2001 to 2013, softwood net growth amounted to 42.7 million tons annually and net growth for hardwoods was 17.3 million tons annually.
- As was the case for total volume, net growth volume of softwoods was greatest in the Southwest Region and net growth volume of hardwoods was greatest in the North Region.

Average Annual Net Growth by AFC Region and Species Group - HARDWOODS
(Period 2001 - 2013)

Timber Harvest Removals - Period 2001 to 2013

- Softwood volume removed annually as a result of harvesting during the 2001 to 2013 time period amounted to 31.6 million tons. Based on the total timber volume in Alabama in 2013, approximately 5.6% of total pine volume was harvested annually during the 2001 to 2013 period. Hardwood volume removed annually averaged 10.9 million tons. Using the same criteria as above approximately 1.9% of total hardwood volume was harvested annually from 2001 to 2013.
- The Southwest Region led the state in softwood (virtually all pine) harvests while the amount of hardwoods harvested was highest in the Northwest Region. Average annual softwood removal volumes nearly doubled the amount of removals in the region that ranked second (Northwest). Thirty-five percent of all softwood harvest removals came from the Southwest Region. Exceptionally high removal volumes in the Southwest Region can be attributed in part to the major hurricanes that affected the region in 2004 and 2005. Large amounts of timber were destroyed and subsequently harvested as a result of the hurricanes.

Average Annual Removals by AFC Region and Species Group - HARDWOODS
(Period 2001 - 2013)

Growth/Removals Ratio by AFC Region and Species Group - SOFTWOODS

Growth/Removals Ratio by AFC Region and Species Group - HARDWOODS

2013 Timber Harvests Volume

- Based on Alabama Department of Revenue severance tax reports for 2013, 1.29 billion board feet of pine sawtimber (Scribner log rule) and 171.6 million board feet of hardwood sawtimber (Doyle log rule) were harvested. In addition, approximately 7.8 million cords of pine pulpwood were harvested while 2.85 million cords of hardwood pulpwood were harvested.
- Sawtimber harvests (includes poles) accounted for 25% of the total harvests in 2013 while pulpwood accounted for 75% of the total volume harvested. (See chart on page 39) Of all sawtimber that was harvested in 2013, 83% consisted of pine and only 17% consisted of hardwood species.
- Pine sawtimber harvests have increased each of the last 4 years while hardwood sawtimber harvests have fluctuated over the same time span. When comparing 2013 sawtimber harvests to the previous five year period's average harvest volume, pine sawtimber harvests have increased by 12.9% while the amount of hardwood sawtimber harvested has decreased by 6.8%. (see chart on page 40) The increase in pine sawtimber harvests over the past several years can largely be linked to the recovery in the housing market. Housing starts in the South region of the United States have increased each of the last 4 years and in 2013 the number of starts was 463,500. In addition, shipments of southern yellow pine lumber amounted to 15.03 billion board feet in 2013, an increase of 5% over the amount shipped in 2012. Similar to housing starts, pine shipments have increased each of the last 4 years. Over the past several years, several hardwood sawmills have either ceased operations temporarily or gone out of business which has contributed to the decline in hardwood sawtimber harvests.

Despite the encouraging news for forest landowners regarding increases in pine sawtimber harvests over the past 4 years, the volume of sawtimber harvested for both pine and hardwood species groups was lower in 2013 than in any year from 1987 through 2008 (1987 was the first year the Forestry Commission tracked timber harvests). Since 2000, total softwood (mostly pine) sawtimber volume in Alabama has increased by 27% and hardwood sawtimber volume has increased by 15%. Whether or not the demand for pine sawtimber will continue to increase in 2014 depends primarily on the housing market. There are indications that new home construction will continue to increase, but only gradually. Factors inhibiting a strong housing market recovery include a sluggish economy, a weak job market, high consumer debt levels, and stricter lending standards.

- There has been a high demand for pine pulpwood over the past several years while the demand for hardwood pulpwood has fluctuated during the same time span. Of all pulpwood that was harvested in 2013, 73% consisted of pine and 27% consisted of hardwood species. When comparing 2013 pulpwood harvests to the previous five year period's average harvest volume, pine pulpwood harvests have increased by 15.2% while the amount of hardwood pulpwood harvested has decreased by 9.1%. (See chart on page 40) The high demand for pine pulpwood can be attributed in part to a strong global pulp and paper market resulting in increased exports of pulp and paper products. In addition, the relatively weak pine sawtimber market results in fewer residues being produced at sawmills; residues are a primary source of chips for paper mills, and when not available in sufficient supplies pulp and paper mills must purchase more pulpwood to compensate for the shortfall.

In Alabama, pine pulpwood production in 2013 increased by 6% over 2012 primarily because of the new pellet mill located in Pickens County which utilizes pine pulpwood to produce its pellets.

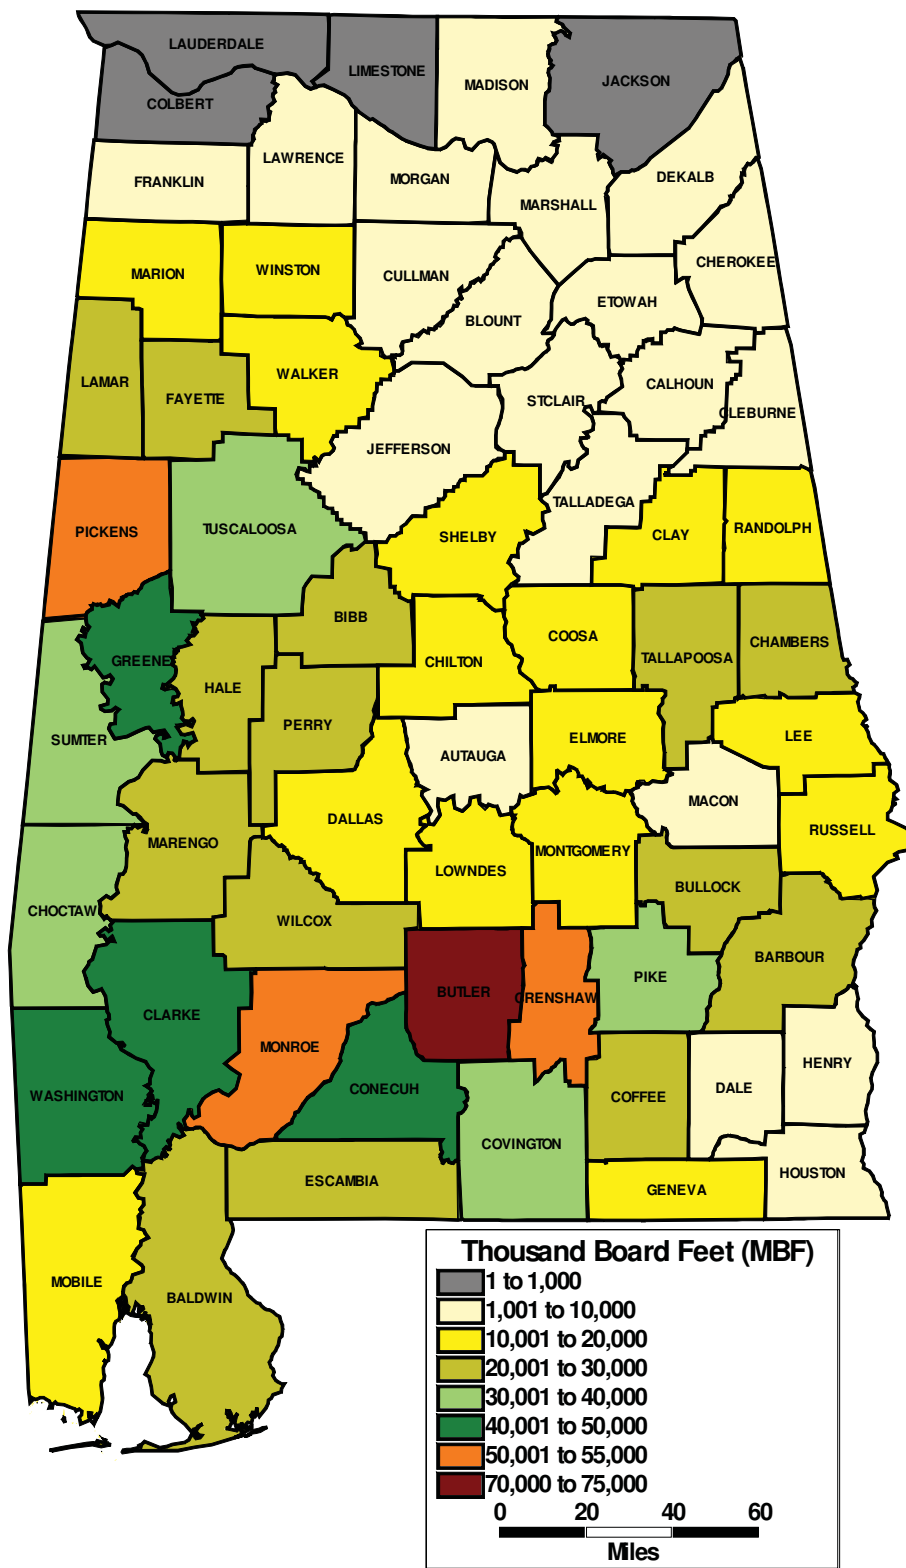

In the South region of the United States pulpwood production will likely remain high in the upcoming years in large part to the ever-increasing demand for wood pellets in Europe. 2013 wood pellet exports from North America to Europe were twice as much as they were in 2011 with the U.S. South accounting for 63% of the volume. As the demand for wood pellets and wood chips for biofuels continues to increase, the construction of wood pellet facilities in the South is expected to increase. In Alabama a wood pellet mill owned by Zilkha Biomass Energy and located in Dallas County is expected to begin operating this year. Expected increased demand for packaging, containerboard, fluff pulp, and OSB will also increase the consumption of pulpwood.

Regarding pulpwood production in Alabama, the story may be different at least for the short term. Due to the cessation of paper production at the large International Paper pulpmill in Courtland, Alabama earlier this year, the amount of pulpwood harvested (both pine and hardwood) may decrease in Alabama at least for the near future.

2013 Timber Price Trends

- Alabama's average stumpage prices for 2013 when compared with 2012 increased in all 4 product categories statewide according to *Timber Mart-South* (see table).

PRODUCT	2013 Stumpage Prices		2012 Stumpage Prices	
	Price (Region 1)	Price (Region 2)	Price (Region 1)	Price (Region 2)
Pine Sawtimber	\$186/MBF	\$208/MBF	\$180/MBF	\$204/MBF
Hardwood Sawtimber	\$254/MBF	\$262/MBF	\$223/MBF	\$222/MBF
Pine Pulpwood	\$24.34/cord	\$33.20/cord	\$21.33/cord	\$29.12/cord
Hardwood Pulpwood	\$41.14/cord	\$38.25/cord	\$24.44/cord	\$29.04/cord

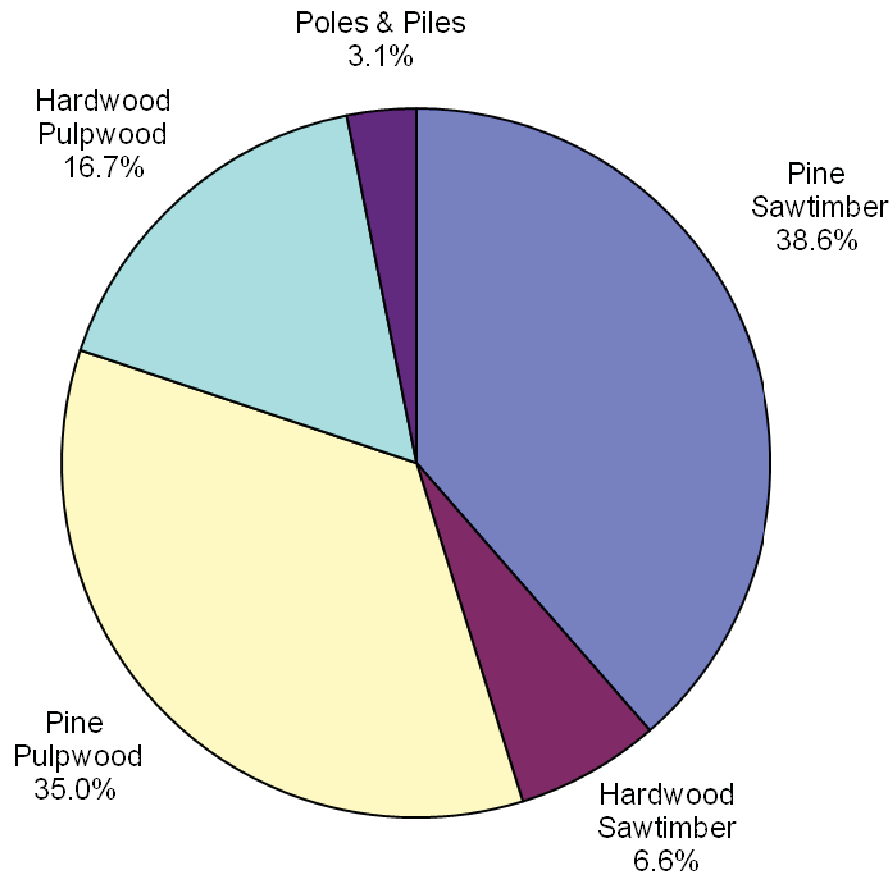

- The total estimated stumpage revenue generated from the sale of all forest products in 2013 was approximately \$675.1 million, an increase of 13.3% from 2012. The increase can be attributed to substantially higher hardwood stumpage prices for both sawtimber and pulpwood, and an increase in timber harvests in the pine sawtimber and pine pulpwood product categories.
- The total estimated stumpage revenue generated from the sale of sawtimber increased by 4.6% from 2012. Pine sawtimber revenue increased by 5.4% while hardwood sawtimber revenue decreased by less than 1%.
- The total estimated stumpage revenue generated from the sale of pulpwood increased by 22.8% from 2012. Pine pulpwood revenue when compared to 2012 increased by 19.4% and hardwood pulpwood revenue increased by 30.7% from 2012.

2012 Timber and other Agricultural Commodities Rankings

Timber ranks second in production of all agricultural commodities, and in 2012 accounted for 10.0% of all commodities, with broilers leading the state in agriculture cash receipts. Timber has consistently ranked second in cash receipts for agricultural commodities. Below is a listing of the top 5 producers.

						2012
Commodity	2008	2009	2010	2011	2012	Ranking
<i>thousand dollars</i>						
Broilers	\$2,689,200	\$2,519,300	\$2,789,300	\$2,671,500	\$2,810,100	1

Eggs	\$298,600	\$286,900	\$291,300	\$322,700	\$351,900	4
Cotton	\$121,400	\$105,400	\$234,200	\$274,300	\$317,900	5

2010 Forest Industry Statistics

Alabama's forest industry is the state's second largest manufacturing industry, producing an estimated \$12.78 billion worth of products in 2010. Of this total, \$8.00 billion was comprised of pulp and paper products, \$3.22 billion, lumber and other wood products, and furniture and other secondary wood products accounted for \$1.6 billion of the total. The value-added contribution of the forest industry in 2010 is estimated at \$6.45 billion, or slightly over 50% of the total shipment value. (Source: U.S. Census Bureau and Auburn Forest Products Development Center)

NAICS	Industry	Employees (number)	Payroll (\$000)	Value-Added (\$000)	Value of Shipments
113	Forestry & Logging	4,558	152,104	N/A	N/A
321	Lumber & Wood Products	21,155	481,509	1,339,901	3,220,020
322	Pulp & Paper Products	12,020	760,675	4,176,566	8,001,900
337	Furniture & Related Products	9,081	297,952	935,487	1,556,856
TOTAL		46,814	1,692,240	6,451,954	12,778,776

Alabama's forest products sector accounted for 12.3% of the value of all manufacturing in the state during 2010. In addition, forestry and forest products account for an estimated 9% of total GDP. (Source: Auburn Forest Products Development Center)

Alabama's pulp & paper industry is not only one of the largest in the United States but also one of the largest in the world. Alabama ranks 2nd in the United States in pulp production and 3rd in paper production. If Alabama was a country, it would rank 8th in the world in pulp production and 12th in paper production. (Source: Auburn Forest Products Development Center)

Alabama is also a major producer of solid wood products. In 2010, an estimated 1.97 billion board feet of lumber was produced in Alabama, 83% of which was from southern yellow pine. Alabama also produced 1.62 billion square feet of wood panels in 2010. Alabama ranks 7th in the U.S. in lumber production and 8th in wood panel production. (Source: U.S. Dep't. of Commerce and Auburn Forest Products Development Center)

2013 Forest Products Investments in New & Expanding Businesses

- During 2013, there were 28 announcements of new and expanding businesses; 7 new and 21 expansions of existing industries. There were 2 fewer announcements in 2013 than 2012.
- A total of 1,294 jobs were created which is 128 more than were created from new and expanding businesses in 2012.
- The money invested in the 28 new and expanding industries amounted to \$188.3 million which is \$112.2 million less than that invested in 2012 by the forest products industry.

FORESTRY CASH RECEIPT REPORT METHODOLOGY

The following calculations were used in converting volume units reported from severance tax forms to the volumes shown in this report. This methodology is based on Forestry Cash Receipt Report, 1986, Dr. Bill McKee, Alabama Cooperative Extension Service.

I. Pine Sawtimber

- A. Pine Lumber Production (MBF Board Measure) * .88 = Lumber Production, MBF Scribner Log Rule.
- B. Pine Logs (MBF Doyle Rule) * 1.157 = Volume Pine Logs, MBF Scribner Log Rule.
- C. (A)+ (B) = Total Pine Sawlog Harvest * Price per MBF Scribner Log Rule = Value of Pine Sawtimber in Scribner Log Rule.
- D. Conversion to cubic feet: 5.5 cubic feet per MBF, Scribner

II. Hardwood Sawtimber

- A. ((Hardwood Lumber Production in MBF Board Measure + (((Switch Tie Pieces*60 BF per Piece) + ((Cross Ties+MineTies+Mine Props)*45 BF per Piece))/1000))* .70 = Lumber Production, MBF Doyle.
- B. (A) + Hardwood Logs, MBF Doyle Log Rule = Total Hardwood Sawlog Harvest in Doyle Rule * Price per MBF Doyle Rule = Hardwood Sawtimber Value.
- C. Conversion to cubic feet: 3.6 cubic feet per MBF, Doyle

III. Pine Pulpwood

- A. Harvest in Cords * Price per Cord = Pine Pulpwood Value.
- B. Conversion to cubic feet: 85 cubic feet per cord

IV. Hardwood Pulpwood

- Harvest in Cords * Price per Cord = Hardwood Pulpwood Value.
- Conversion to cubic feet: 80 cubic feet per cord

V. Poles and Piling

- A. Pole Production in MBF Doyle + Piling Production in MBF Doyle * Weighted price of Poles and Pilings per MBF Doyle = Value of Poles and Piling.
- B. Conversion to cubic feet: 3.6 cubic feet per MBF, Doyle

VI. Turpentine

- Turpentine in 400 Pound Barrels * Price per Barrel = Turpentine Value

VII. Forest Inventory & Analysis (FIA) Statistics

- A. Softwoods Species Group: 28.6 cubic feet per ton
- B. Hardwood Species Group: 26.3 cubic feet per ton
